

WATERMAID

Salt Water Chlorinators

- Capable of producing more than 5 litres of liquid chlorine equivalent per day.
- No need to buy, handle or store expensive hazardous chlorine chemicals.
- No red eyes or itchy skin.
- Proven long-lasting Cell design, used since 1971.
- Full control and true reading of chlorine production from 0 to 30 Amps.
- Long life Cells – Average 5 to 8 years.

How it Works

The Watermaid Salt-Water Chlorinator manufactures chlorine in-situ as mild salty water passes through the electrolytic Cell.

Chlorine as produced by the Watermaid Cell is produced over a period of several hours so is dilute and more evenly dispersed in the water, does not cause irritation, and the salt water is particularly beneficial for asthma and bronchitis sufferers.

Product Facts

Ezyclean Series Cells

Unique Registered Design

Removable cathode for ease of cleaning

QT Series Cells

QT300 – (as shown) Domestic Pools

QT400 – Commercial Pools

STANDARD FEATURES to ALL Watermaid Cells

- Solid Titanium Tube for longer electrode life and less build up.
- Large Anode Platinum Coated Surface Area – up to 410 sq. cm, ensuring high chlorine production capability.
- Able to chlorinate up to 150,000 litres of water.
- Heavy-duty 30 Amp rated components.

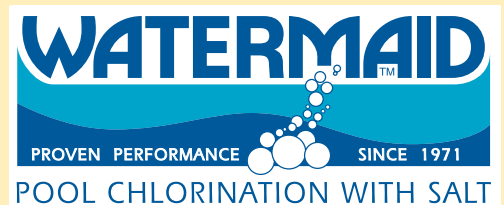

The Watermaid Power Supply

- 400VA transformer, double the size of most other brands and capable of operating to 30 Amps.
- Full control and true reading of chlorine production from 0 to 30 Amps.
- Advanced PC board and circuitry to prevent component overloading.
- Capable of tolerating a salt level from 3000 ppm to salt saturation without damage to the Power Supply or Cell.
- Heavy-duty 30 Amp rated components.
- Optional Timeclock.
