

SALES FORECAST & INVENTORY GATE

Demand Planning and Replenishment Solution

Fastprod.com on-demand modules help companies to:

- Improved forecast accuracy: Translates into accurate orders
- Trigger higher service levels: Fewer out of stocks
- Improve sales collaboration: Enhanced visibility & information
- Enhance competitiveness: Measurable cost reductions
- Manage growth & expansion: Increase your efficiencies

Fastprod.com optimize sales forecast, inventory management and purchase order generation.

Retailers, Manufacturers, Importers and Distributors can have instant access to sales forecast, promotion plans, inventory levels and order status information from any location.

FORECASTING

This module is a compilation of several key solutions to counteract demand volatility and overcome such obstacles as limited visibility. Fastprod.com equip you with an essential tool to drive efficiently your forecasting activity.

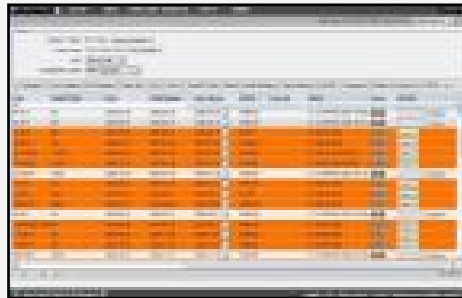

Designed to automate forecast, clean sales history and leverage statistics models. We offer a robust and responsive Demand Planning module that enables you to respond quickly and effectively to variations in customer demand.

REPLENISHMENT

This module support higher product availability, hence larger revenues and earned margins. It simultaneously capture actual orders, orders in inventories, delivery lead times and sales forecast, to provide you with time phases order plan.

Designed to help you setting up, in a pragmatic way, the basics of a replenishment policy. One of the key output is the level of safety stock required for each item at each location and a calculated Safety stock to ensure that a certain level of customer service is achieved.

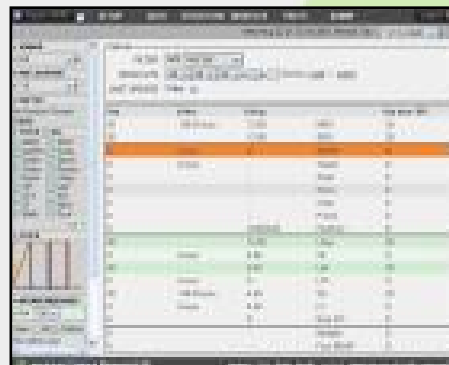

PROCUREMENT

This module help you orchestrate the flow of orders and its visibility. Switching to "E-Purchase Orders" is a strategic axis for most businesses. PO in a dematerialized form offers companies the possibility of considerable savings (costs of processing paper transactions).

Designed to increase your efficiencies, our solution can substitute itself to transactional order management system data.

This includes order creation, upload from your ERP, and exceptions notification.

IN LINE WITH YOUR BUSINESS

Fastprod.com offers solutions that removes the need for capital investment in servers, database or IT professional.

Fastprod.com pulls data, forecast and more from your ERP system.

Fastprod.com takes in total 15 days to implement. Each module is easy to use and training is usually delivered in as little as five hours.

EASY TO USE

Fastprod.com On-Demand applications allow you to buy Software-as-a-Service (SaaS) and get up and running faster and cheaper. We take out the complexity of application maintenance, management, support and upgrades.

Fastprod.com is a Web-based solution that exploit best-of-breed technology to deliver comprehensive modules. Firefox Web browser interface further enhances its ease of use.
